Rainwater Harvesting Applications

StormTrap® offers rainwater harvesting applications that collect rainwater on site for use in irrigation or grey water use inside buildings. The StormTrap® system can help meet low impact development goals with our stormwater harvesting, biofiltration, and infiltration products.

Rainwater Harvesting Installations

Baha'i Temple, Wilmette, Illinois

Stormwater runoff flows into the 3048 mm StormTrap system and is harvested to irrigate the temple grounds. The DoubleTrap® system holds over 141.584 m³ of rainwater.

Walmart, Santa Fe, New Mexico

The 3048 mm DoubleTrap system was wrapped with a liner and geotextile fabric to create the watertight harvesting system. Rainwater from the building's roof catchment area runs into the system and is harvested for landscape irrigation.
